Author's review of the complete story, tamil film story mani mani mahasamundram. Praveen, read and watch Bollywood movies online, Indian movies, latest tamil movies, tamil tamizh movies, indian movies, hd tamil movies, live tamil movies, tamil tamizh movies, tamil tamizh movies tamil tamizh movies tamil tamizh movies tamil tamizh movies. Tamil Movies Download Free. Throughout this application various publications are referenced in parentheses by arabic numerals within parentheses. Full citations for these references may be found at the end of the specification immediately preceding the claims. The disclosures of these publications in their entireties are hereby incorporated by reference into this application in order to more fully describe the state of the art as known to those skilled therein as of the date of the invention described and claimed herein. A variety of neurodegenerative disorders are characterized by the loss of specific neurons. Examples include Alzheimer's disease (AD), Huntington's disease (HD), and Parkinson's disease (PD). Neuronal loss in the CNS can also result from acute brain injury, which can occur following hypoxia, head trauma, or cerebral infarction. There is also a category of degenerative disorders called excitotoxicity, which are mediated by excessive stimulation of glutamate receptors. Recent advances in gene transfer technology have provided new strategies for treating human neurodegenerative diseases. Delivery of a normal gene into a patient can correct the genetic defect responsible for a disease phenotype. This strategy is best demonstrated in patients suffering from a genetic defect in a cystic fibrosis gene (CF). These patients are phenotypically normal when treated with recombinant deoxyribonuclease (DNase) that cleaves the beta. chain of DNA, which contains the CF gene. A more direct approach involves introducing exogenous genes directly into a patient to replace defective genes. Examples of this approach include the use of viral vectors (DeVito et al., 1990) and nonviral vectors (Kim et al., 1991). Transplantation of fetal dopaminergic neurons to the striatum of Parkinson's disease patients has shown some promise (Gage et al., 1990). However, the clinical application of neural transplantation is limited by the availability of target cells and the need for immunosuppression, which exposes the patient to a variety of problems including the transmission of infectious diseases and cancer. Other therapeutic strategies 82157476af
